Description

OUR TECHNOLOGY

At Site Shade Company we know that we are going to be in the client's home for years. For our product to belong in that environment we need to be in tune with the client's vision for the space. To do this we need a product that can adapt to the environment it surrounds itself with and this would include being able to manipulate the depth required to install, modifying the finishes to look intentional and offering fabrics that stay ahead of trends and still offer the right functionality. With the Artisan we have created a one-of-a-kind shade system that allows us to be in alignment with the vision of every one of our clients.

01

02

We start with a flat sheet of ultra-light weight aluminum and sculpt it into a shade cover that can be painted or finished in any color. We use a hand brushed stainless steel modular mount system equipped with magnetic couplers that attach the shade to the cover and the entire system to the wall. Built into the cover are magnetic sliders that obscure or hide any extra space at the end of the shade enclosure. The system also allows us to move the shade cover forward or backwards and angle the cover on an axis to hide uneven sheetrock. We can even set the cover on a different geographical plane if we are up against a terraced or narrow mount window surround. What does this all mean to the client? It means a better and tighter fit, color combinations that look intentional and a serviceable and expandable offering that looks tailor made to the home.

We also have a patented gap fill concept built in to each valence that allows us to bump end caps out eliminating any light gap at the end of cover hardware. Our mounts are made from an American stainless steel and tumbled to perfection, our covers and end caps are laser cut American cold rolled steel and CNC bent to exact tolerances providing a sleek and built in look to our shades. Multiple elements of our mount system are patented and allow for a clean, custom and built-in look within any environment.

03

04

On top of our mount system we have created our own patented way of blacking out light gap at the edge of shade fabric as it raises and lowers, a patented way of extending tubing without compromising hardware, a patented bicycle inspired chain guide system to go along with our top of the line chain clutch. It all factors in to what we are about at Site Shade Company. Creating engineered shade systems from the world's best components.
