OUR

TECHNOLOGY

At Site Shade Company, we understand our products become part of our clients' homes for years to come. That's why we focus on aligning with each client's vision by offering shades that adapt to their space through flexible installation depth, intentional finishes, and forward-thinking fabrics with lasting functionality.

With our Artisan valance, we've created a one-of-a-kind shade system designed to seamlessly match the unique style and needs of every space.

01

02

We start with a sheet of ultra-lightweight aluminum and shape it into a custom shade cover that can be finished in any color. A hand-brushed stainless steel modular mount system with magnetic couplers connects the shade to the cover and secures the entire system to the wall.

Integrated magnetic sliders conceal any gaps, while the system allows us to adjust the cover forward, backward, or at an angle to account for uneven surfaces. It can even be positioned on a different plane for challenging window conditions like terraced or narrow surrounds.

For the client, this means a cleaner fit, intentional color design, and a serviceable, adaptable solution that feels truly custom to the home.

Every home has its nuances—uneven walls, unique window conditions, and architectural details that standard solutions struggle to accommodate. Artisan is designed to work with these realities, not against them, allowing us to create a refined result even in challenging spaces.

03

04

Artisan is more than a static solution. Its modular design allows for adjustments, updates, and service over time so the system can evolve with the home while maintaining its performance and appearance for years to come.
